We'll come back to this throughout the session.

The Website Junk Drawer

Websites don't become confusing overnight.

It happens one update at a time.

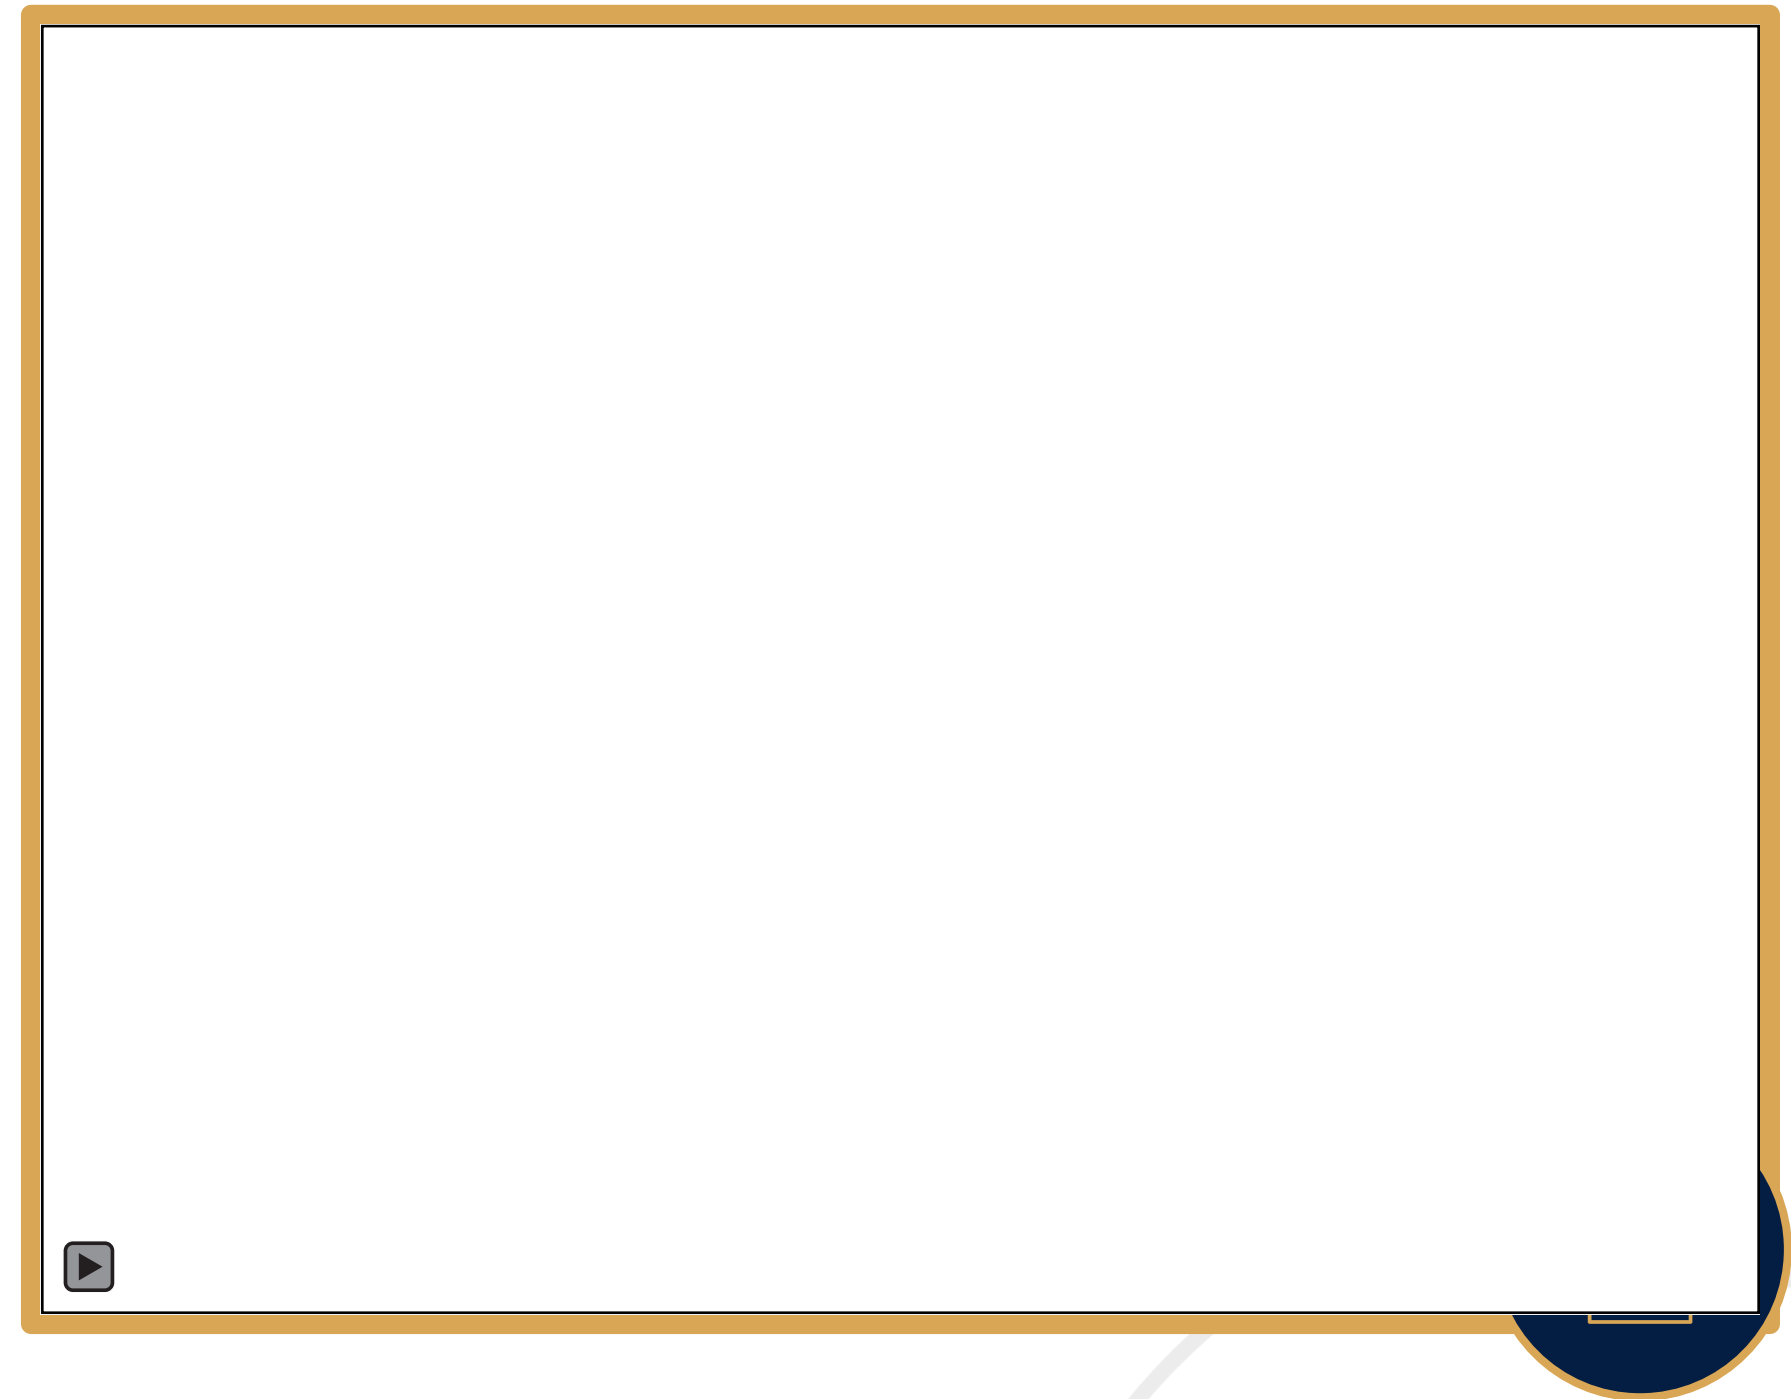

A form gets added.

A page gets copied or created.

An old document never leaves.

If members have to dig, **your website is hiding instead of guiding.**

Viewing Your Website Through Your Members' Eyes

Members usually visit your website because they need to solve something.

- ✗ They are not thinking about departments.
- ✗ They are not looking for your internal structure.
- ✗ They are not trying to decode where something “should” live.

They want to know:

Where do I go?

What do I need?

Who can help me?

What happens next?

A member-centered website starts by asking **how people look for help, not how your organization is arranged.**

Five Signs Your Website Needs Attention

A website audit starts by noticing where members get stuck.

1

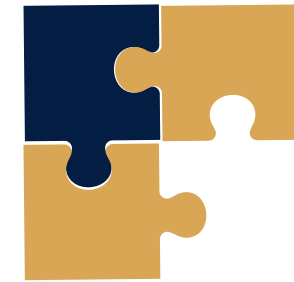

Members can't find anything

2

Important info is buried

3

Every section feels different

4

No clear next step

5

Built for your org, not your members

The **FIND** Framework

A simple way to evaluate your website through your members' eyes.

Findable

Can members quickly **locate** what they need?

Intuitive

Does the navigation make **sense** without explanation?

Necessary

Does this content serve a **clear** purpose?

Directed

Does this page **guide** members to a next step?

If members can't **FIND** it, they can't use it.

Using AI to Audit and Improve Your Website

AI can review your website through a member-centered lens and surface issues your team may be too close to notice.

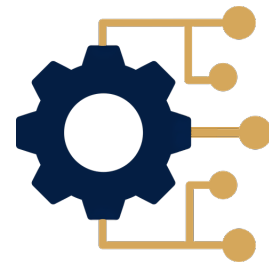

1

Audit Faster

Find outdated, confusing, or inconsistent content.

2

Organize Smarter

Spot navigation gaps & member journey friction.

3

Improve Consistently

Apply brand voice, structure, and clarity across pages.

AI will not create your strategy for you, but it can reveal where your website has drifted from it.

Website Alignment Check

Think of one high-use page on your website.

Give yourself one point for every “No” or “Not Sure.”

Score 2 or more?

That page is ready for an **AI-assisted audit**

1		Findable Can a member find this page without knowing your department structure?	☐ Yes	☐ No	☐ Not Sure
2		Member-Focused Is the page written in member language, not internal language?	☐ Yes	☐ No	☐ Not Sure
3		Visible Is the most important information visible near the top?	☐ Yes	☐ No	☐ Not Sure
4		Action-Oriented Does the page clearly tell the member what to do next?	☐ Yes	☐ No	☐ Not Sure
5		Aligned Would this page still feel accurate and on-brand if a member saw it today?	☐ Yes	☐ No	☐ Not Sure

Find the Friction

What might confuse or slow down a member?

Look for:

- ✓ Jargon or internal language
- ✓ Hidden or hard-to-find information
- ✓ Too many choices
- ✓ Unclear next steps
- ✓ Outdated design

Turning the Framework Into an AI Audit

AI works best when you do not just ask it to “review my website.”
Give it a lens, standards, and a repeatable process.

Give AI the Lens

Define what a good member experience looks like.

Audit Prompt

Review this page using the **FIND** Framework: Findable, Intuitive, Necessary, and Directed.

Give AI the Standards

Provide the standards AI should measure against.

Example Standards to Include

Member-focused
Clear, plain language
Professional & approachable tone
WCAG accessibility expectations

Give AI the Background

Share the background and context AI needs to produce a meaningful audit.

Context to Provide

Who your members are
Your website goals and key actions
Brand voice and terminology
Relevant policies or resources

Use Skills to Make It Repeatable

Skills package your audit instructions, standards, and output format so AI follows the same process every time.

Better inputs create better audits

What a Useful AI Audit Looks Like

It turns feedback into clear next steps.

Issues Found

What's confusing,
missing, or hard to use.

Recommended Fixes

What should change?

Review Needed

What requires human
judgment.

A good AI audit helps you decide **what to do next**.

OMAG Use Case:

AI as a Website Content Partner

How Claude Chat helped support website updates, content clarity, and brand consistency.

● Our website problem

● Where AI helped improve clarity and consistency

● What remained human in the process

Real work. Real results. **A better website experience** for our members.

The OMAG Website Problem

A one-off resource page became the accidental model for more department pages, and over time it created a consistency problem.

- A long scroll of disconnected resources
- Anchor-link navigation that became harder to scan
- Specialized pages built in different ways
- Custom colors and layouts outside brand standards
- No uniform path for members to find what they needed

original resource page

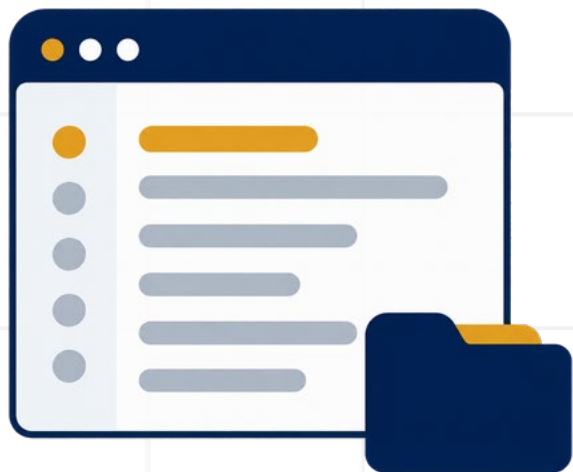

The problem was not that we lacked content. The problem was that the content had outgrown its structure.

Where AI Helped OMAG

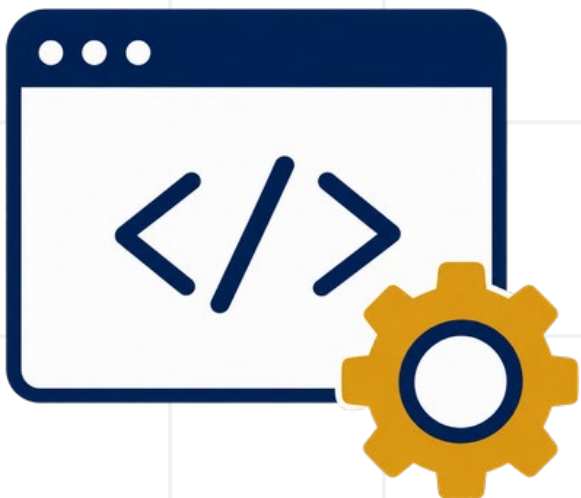

Claude Chat helped turn overloaded content into clearer, more consistent website sections.

AI helped shift the work from adding more resources to building a better resource system.

Reorganized the Content

Grouped a long scroll of resources into clearer sections based on what members needed to find or do.

Optimized the Page Build

Helped shape page structure and code so the content was cleaner, easier to maintain, and better optimized for search.

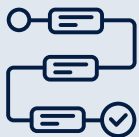

Unified the Brand

Helped align department pages with a consistent layout, tone, colors, and member experience.

RESULT: Members can scan, find, and take action faster.

RESULT: Pages are cleaner, easier to maintain, and more search-friendly.

RESULT: Departments share a more unified look, feel, and voice.

What Stayed Human

AI helped shape the content and structure, but people still made the final decisions.

Choosing the Right AI Workspace

Choose the tool based on how deep you want the audit to go.

Light Audit

Deeper Audit

Broader Workflow

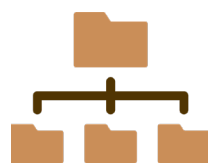

Claude
Quick Reviews

- ✓ Review page copy
- ✓ Test audit prompts
- ✓ Rewrite for clarity

Claude Code
Website-level audit

- ✓ Review website files
- ✓ Find patterns across pages
- ✓ Suggest updates

Claude Cowork
Workflow Support

- ✓ Work across files and tasks
- ✓ Organize supporting materials
- ✓ Coordinate next steps

Start with the task, then choose the workspace. The right workspace helps AI do more useful work.

FIND Audit Prompt Builder

Scan the QR code to build an AI audit prompt for one page on your website.

1

Choose a Page

Pick a member-facing webpage.

2

Score it with FIND

Answer 4 quick questions.

3

Spot the Friction

Identify what may be getting in the way.

4

Generate Your Prompt

Copy a ready-to-use AI audit prompt.

link.omag.org/audit-prompt

Better input creates a **better audit.**

Turning FIND Into a Claude Skill

Instead of rebuilding the **same audit prompt** every time, use this Skill to make the process repeatable and consistent.

WITHOUT THE SKILL

One-off Prompt

Re-explain framework

Re-list the standards

Rebuild the output format

Hope the audit is consistent

WITH THE SKILL

Repeatable Audit

FIND Framework defined

Standards are built in

Output format stays consistent

Easier to reuse across pages

Save time. Stay consistent. Review with confidence.

The Skill includes:

FIND Framework definitions

Member-experience review lens

Pool-specific content concerns

Human-review guardrails

Structured audit output

It returns:

Quick summary

FIND scorcard

Issues found

Recommended fixes

Human review needed

Suggested follow-up prompt

What to Remember

Three ideas to guide your AI-powered website reviews.

1

Star with a Member.

Your website should reflect how members look for help, not how your organization is arranged.

2

Give AI a Framework.

Tools work better when you define the lens, standards, and the output you expect.

3

Keep People in the Process.

AI can support the audit, but humans own accuracy, judgement, and trust.

AI is most useful when it helps your website become **clearer**, **more consistent**, and **easier to use**.

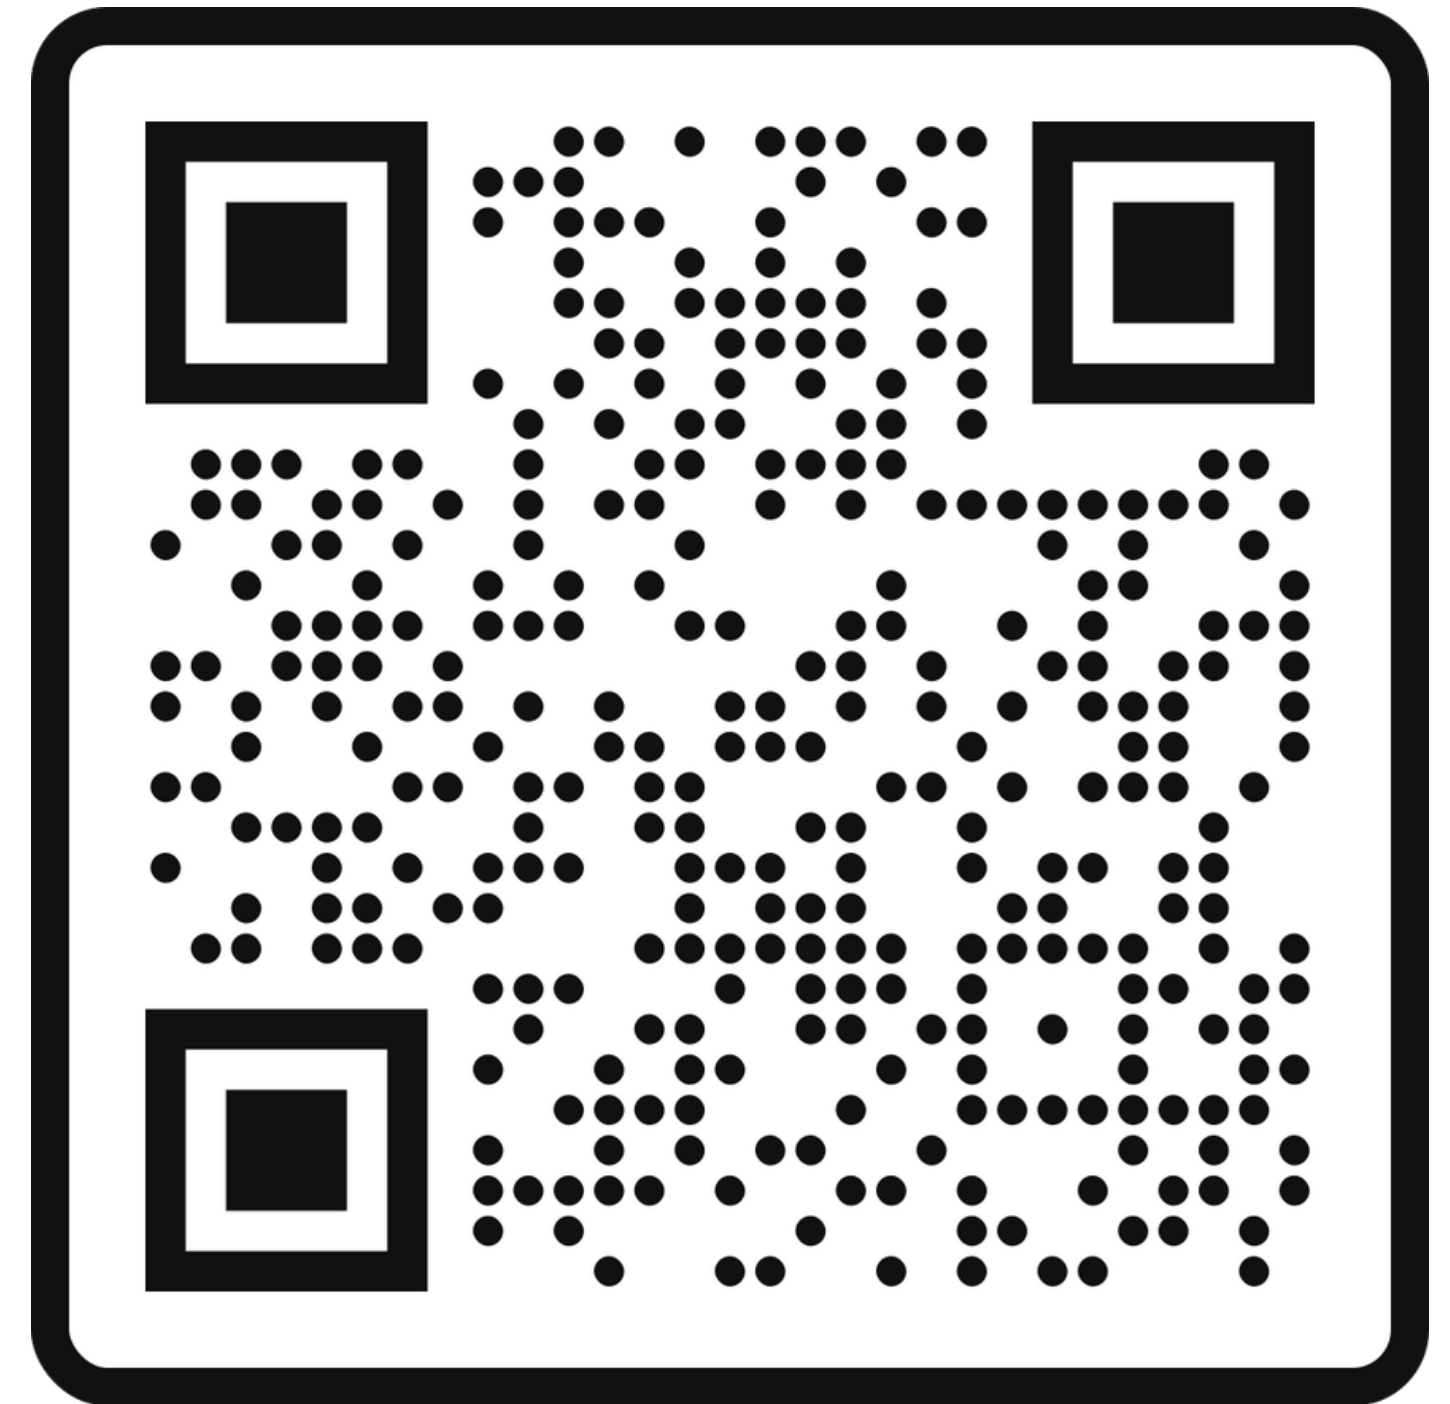

Take the Toolkit With You

Use the session hub to revisit the framework, build prompts, and start auditing your own website.

- FIND Framework
- Audit Prompt Builder
- Claude Skill Notes
- Example Prompts
- Session Resources

Start with one page. Find the friction. Build a better member experience.
